

Calibration Chamber, 139-CC

INTRODUCTION

The Calibration Chamber is used to connect Servo Gauge to stilling well in case of non-pressurized tanks or to isolation ball valve in case of pressurized applications. It provides a fixed reference for calibration of the Servo Gauge. A mechanical stopper fitted at the top end within the calibration chamber achieves this

Removing the side flange of the calibration chamber can access the displacer of Servo Gauge. A glass window is provided on the side flange for visual reference only for 6 kg/cm² versions. Offset calibration chamber can be provided to match Servo gauge to smaller size stilling well. Suitable spool piece can be used to match the calibration chamber to various sizes of stilling wells.

ACCESSORIES

Following Accessories are suggested for Calibration Chambers used for pressurized applications:

1. Weatherproof Pressure gauge 100mm dial, Range 0-60 kg/cm²
2. 1/4" Stainless steel Needle valve to de-pressurize the Calibration Chamber after closing the ball valve

Servo Gauge fitted on High Pressure Calibration Chamber

Calibration Chamber for Low Pressure Applications

ORDERING INFORMATION

MODEL

139-CC-CALIBRATION CHAMBER FOR SERVO GAUGE 139

High 0 – 30 kg / cm ²	✓	X	X	✓	✓	✓	X	✓

NOTES

- Select Displacer diameter from Selection table
- Stilling-well sizes chosen are of minimum size. Higher sizes can be chosen
- Adjust Adaptor / Stilling well height to get display of Servo Gauge at eye level (1.5m)
- **Pressurized applications are shown in RED**
- **Non-Pressurized / Low Pressure applications are shown in BLUE**
